**TARIFF FORMAT**

- A. **Page Numbering** - Page numbers appear in the upper right corner of the page. Pages are numbered sequentially. However, new pages are occasionally added to the tariff. When a new page is added between pages already in effect, a decimal is added. For example, a new page added between Page 14 and 15 would be 14.1.
- B. **Page Revision Numbers** - Revision numbers also appear in the upper right corner of each page. These numbers are used to determine the most current page version on file with the Commission. For example, the 4<sup>th</sup> revised Page 14 cancels the 3<sup>rd</sup> revised Page 14.
- C. **Paragraph Numbering Sequence** - There are various levels of paragraph coding. Each level of coding is subservient to its next higher level:
- 2
  - 2.1
  - 2.1.1
  - 2.1.1.1
- D. **Check Sheets** - When a tariff filing is made with the Commission, an updated Check Sheet accompanies the tariff filing. The Check Sheet lists the pages contained in the tariff, with a cross-reference to the current revision number. When new pages are added, the Check Sheet is changed to reflect the revision. An asterisk designates all revisions made in a given filing (\*). There will be no other symbols used on this page if these are the only changes made to it (i.e., the format, etc. remain the same, just revised revision levels on some pages.) The tariff user should refer to the latest Check Sheet to find out if a particular page is the most current on file with the Commission.

### 3.3 Syniverse Signaling

This service allows the customer to receive signals for call set-up out of band. This option is available via Feature Group D truck groups purchased by Syniverse. This option requires the establishment of a CCS7 Signaling Connections and CCS7 Signaling Terminations between the customer's signaling point of interface and the Company-designated Signal Transfer Point (STP). A minimum of one pair of one quad of CCS7 Connections and Terminations is required.

#### 3.3.1 CALL RELATED DATABASES AND TCAP MESSAGE TRANSMISSION.

Database services provide customers network intelligence to deliver TCAP messages to end users. This service allows customers to deliver TCAP messages and provides for the transmission of information corresponding to TIA Interim Standard 41 (Sub-systems 005-010) over a customer's SS7 Signaling Connection. TCAP Messages will be routed according to originating and destination point codes provided by the customer. This option requires the utilization of SS7 Signaling Connections and SS7 Signaling Terminations between the customer's signaling point of interface and each of the Company's Local Signal Transfer Points (STPs) within the LATA. This service is available where facilities and switching capability are available.
